

PUKETUTU GOLD

Living Earth's Puketutu Gold is so named, because it's derived from our older piles of compost and various mixes that have been left to age gracefully. A heavy soil-like aged compost that has good nutrient levels and is proving a real find in the quest by landscapers to purchase a growing media that resembles topsoil with good nutrient qualities.

PRODUCT SPECIFICATIONS

Moisture	30 - 60%
pH range	5.0 - 8.0
Electrical conductivity (mS/cm)*	≤5.0
Bulk density (kg per m ³)	800 to 1100

Analysed in a 1:1.5 water extraction.

QUALITY STANDARD

We take great care to bring you premium product. Our products are created from recovered green waste and are compliant to the New Zealand Standard NZS: 4454 for Composts, Soil Conditioners and Mulches.

HANDLING PROCEDURE

When handling larger volumes of Puketutu Gold, ensure stockpiles are covered to give protection against weather conditions.

INGREDIENTS

- Aged compost
- Aged media

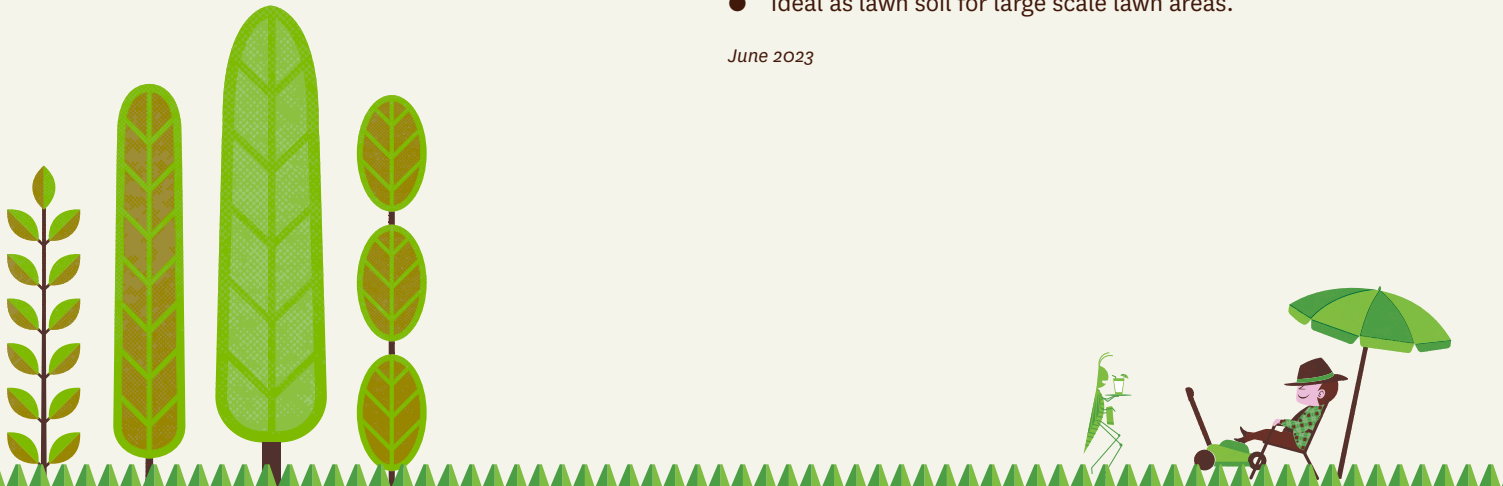

FREIGHTING & APPLYING

A truck & trailer will carry approximately 28m³. Use as a nutrient rich top soil in garden beds and all large scale landscape areas. Compact lightly.

RECOMMENDED USE

- Excellent as a topsoil alternative.
- Ideal for establishing NZ native and exotic mass plantings and amenity horticulture beds.
- Ideal as lawn soil for large scale lawn areas.
